

Annual Report 2025

OODA AI AB (publ) ISIN-code: SE0020699296

Disclaimer: This document is an English translation of the original Swedish document "OODA AI AB (publ) Årsredovisning 2025". The translation is provided for convenience only. Errors, omissions, or interpretation differences may occur. In the event of any inconsistency, the original Swedish document shall prevail and should be treated as the authoritative source.

The Board of Directors and CEO of OODA AI AB (publ) submit the following annual report and consolidated financial statements for the financial year 2025. The group's legal parent company is OODA AI AB (publ), corporate registration number 556737-5489.

The annual report is prepared in Swedish kronor, SEK. Unless otherwise stated, all amounts are reported in thousands of kronor (kSEK). Information in parentheses refers to the previous year.

CEO Statement

Dear shareholders,

OODA AI enters 2026 in a new phase. Over the past years, we have built, structured and positioned the Company. The focus is now clear: to scale the business and increase usage of our platform.

A shift from build-up to growth

The work carried out over the past 12 months has fundamentally changed the Company's position. We have established a functioning technical platform, secured commercial agreements with recurring customers, and strengthened our financial structure through debt reduction and capital injections. This means we are now in a position to shift focus from structure and stabilization to growth and scaling.

A scalable business model with clear leverage

Our platform is designed to scale without a corresponding increase in the cost base. This means increased usage has a direct impact on profitability. As availability expands through self-service and partner distribution during 2026, the conditions for broader distribution, increased usage and a more scalable business model are strengthened. This creates a solid foundation for improved predictability and long-term profitability.

AI evolving from tool to infrastructure

We are in a shift where AI is no longer a complement, but an integrated part of companies' operational core. Our solutions are used in processes where efficiency, cost reduction and data quality have a direct impact on customer outcomes. Once implemented, usage tends to grow over time, creating value expansion within existing customer relationships. This strengthens both the revenue base and our long-term position.

Positioning within next-generation AI infrastructure

Alongside our commercial progress, we continue to build our decentralized AI initiative. We have moved from concept to operational infrastructure with an MVP and testnet, where both technical functionality and economic flows are validated. The next step is to take this model towards commercial deployment. Tokenization is a central part of this, enabling the creation of an economic layer where computation, verification and incentives interact. This opens up new revenue streams and a business model that extends beyond traditional software.

Distribution and ecosystem as growth drivers

To accelerate growth, we are building a partner structure that enables distribution at scale. Through partners, we can reach new markets and customer segments without carrying the full sales effort ourselves. Combined with self-service, this creates a model where both direct sales and indirect channels contribute to growth. Our ambition is to establish an ecosystem where customers, developers and partners build on top of our platform.

Focus going forward

Our priorities are clear: increase platform usage, expand distribution and continue developing the underlying infrastructure. The combination of a scalable product, a growing market and a differentiated technical position provides strong conditions for growth with improving profitability. At the same time, we continue to strengthen our position within compliant computing and verifiable AI infrastructure, where secure execution, TEE-based architectures and traceability at the inference level form key parts of our long-term differentiation.

We enter 2026 with a clear focus on growth, margin expansion and establishing OODA AI as a long-term player in next-generation AI infrastructure.

Arli Charles Mujkic
CEO and Founder

Management report

Information about the business

OODA AI AB (publ) is a group of companies focused on artificial intelligence (AI) and software-as-a-service (SaaS). The group of companies provides AI services in the form of decentralized and distributed AI computing, AI tools, and AI consulting, training, and implementation. The group of companies operates in a global market, with headquarters in Stockholm (Sweden) and Munich (Germany). Listed on Nasdaq Stockholm First North, also traded on Börse Frankfurt, Börse Stuttgart, and Börse Munich.

The Group has had a breakthrough year in 2025, with a focus on commercialization, scaling and further development of the Company's technical platform. During the year, OODA AI has moved from a build-up to a clearer growth phase, where the platform has developed into a more complete and scalable infrastructure for enterprise AI. The platform brings together AI models, applications and workflows in an integrated infrastructure that enables companies to implement and use AI at scale. The platform provides access to over 150 AI models and a broad ecosystem of integrations via a unified interface and API. In parallel, the Company has taken decisive steps in decentralized AI, with the completion of litepaper, the launch of MVP, the operational test network and the continued development of the SOODA token as an economic layer in the network.

During the year, the Parent Company has established and further developed several important customer agreements. During the year, the collaboration with Win.Rocks AG has grown to a total contract value of approximately SEK 21 million, and in December 2025, a new agreement of at least SEK 15 million over 24 months was signed. During the year, an agreement was also signed with Sergel Kredittjänster regarding AI services for document interpretation. OODA AI has also established a growing customer base in several sectors, including banking and debt collection, the health sector, staffing and industrial applications. During 2025, the Company has also developed its partner strategy through a dedicated partner program and strategic collaborations with, among others, Allgeier Inovar GmbH and TIM Solutions GmbH, which creates the conditions for broader distribution and faster market penetration.

During 2025, the Group continued its work to streamline the portfolio structure and reduce the complexity of the group of companies. During the first half of the year, the companies EO Capital 2, EO Capital 3, EPLIK 202306 and EPLIK 202312 merged into oodash Portfolio AB. During the second half of the year, the merger of oodash Sweden AB into oodash Portfolio AB was also registered, and after the end of the financial year, the merger of EO Capital 1 AB into OODA AI AB (publ) was registered.

In parallel, the Company has conducted a review of its financial holdings with the aim of focusing resources on the core business within AI and decentralized infrastructure. The review has included both an assessment of the strategic relevance of the holdings and their valuation according to applicable accounting principles. In connection with this, certain holdings have been written down, in some cases to a book value of SEK 0, based on a conservative valuation.

The Board's current focus is to gradually sell, spin off, merge or otherwise liquidate remaining portfolio holdings as appropriate strategic alternatives arise, rather than building a broad investment portfolio within the Oodash Portfolio. Companies may be added to the portfolio if they are deemed to be in line with the overall strategic direction within AI.

The Group's revenue in 2025 amounted to SEK 32,058 thousand (SEK 1,061 thousand), of which net sales amounted to SEK 31,880 thousand (SEK 1,056 thousand). The sharp increase in sales is a direct consequence of the invoicing of several major transactions taking place according to previously communicated plan. Earnings per share amounted to SEK -35.29 per share compared to SEK -29.00 per share in 2024. The negative earnings trend is mainly attributable to impairments and results from financial items, rather than the underlying operational activities.

The operating profit for the Group in 2025 amounted to -29,270 thousand SEK (-51,781 thousand SEK), where the EBITDA result was 2,957 thousand SEK (-28,229 thousand SEK). During the year, the result was burdened by one-off costs of approximately 10,238 thousand SEK attributable to the liquidation of older company structures, which are not considered to be recurring. Adjusted for these, EBITDA amounted to approximately 13,195 thousand SEK, corresponding to an adjusted EBITDA margin of approximately 32 percent of the Group's revenue. Personnel costs in the Group amounted to -9,210 thousand SEK (-7,432 thousand SEK). The Company has continued to have a low cost base and, in line with previous communication, has not carried out any major recruitment during the year. Result from financial items in the Group in 2025 amounted to -95,853 thousand SEK, mainly due to impairments and results from associated companies in connection with the continued streamlining of operations.

The Group's financial assets amounted to 8,387 thousand SEK at the end of 2025, compared to 96,036 thousand SEK at the end of 2024. The change is mainly attributable to impairments, divestments and revaluations of financial assets, including results from associated companies. During the year, the Company has conducted a review of its financial holdings with the aim of streamlining the operations and focusing on the core business within AI and decentralized infrastructure. In connection with this, certain holdings have been written down, in some cases to a book value of 0 SEK, based on a conservative valuation.

The Group's equity at the end of 2025 amounted to 23,859 thousand SEK, compared to 119,371 thousand SEK at the end of 2024. The number of shares increased during the year from 3,385,254 to 3,731,465 shares as a result of capital acquisitions. Cash flow from operating activities amounted to -16,662 thousand SEK (-29,680 thousand SEK), cash flow from investing activities amounted to -49,413 thousand SEK (-19,093 thousand SEK) and financing activities contributed positively with 44,302 thousand SEK (68,922 thousand SEK). During the second half of 2025, the Group simultaneously reported a positive cash flow from operating activities of 5,098 thousand SEK, which indicates a strengthened operational development.

The company is headquartered in Stockholm.

Development costs and research

According to the Company's accounting principles, development costs are capitalized when all criteria in K3 Chapter 18.6 are met, such as identifiable assets, technical and commercial feasibility and the probability that future economic benefits will flow to the Company. Expenses that do not meet the criteria are expensed directly. The Parent Company has capitalized development costs of approximately SEK 8.7 million in 2025, compared to approximately SEK 8.5 million in 2024.

The capitalizations in 2025 are mainly attributable to the continued development of the Company's platform and AI products. This includes the further development of OODA AI's Universal AI Platform, where AI models, applications and workflows are brought together in an integrated infrastructure, as well as the underlying infrastructure for decentralized, verifiable and scalable AI computing. During the year, development work has also included work related to the Company's Web3 infrastructure, including MVP, test network and technical components that underpin tokenization and the network's economic layer.

The company does not conduct basic research but focuses on applied development of AI platforms, AI products and decentralized infrastructure with the aim of strengthening competitiveness and creating scalable services for existing and future customers. The company continuously monitors capitalized projects to ensure that the carrying amounts of the assets do not exceed the recoverable amount.

Activities requiring a permit or notification according to the Environmental Code

The parent company does not conduct any activities that require permits or notification according to the Environmental Code.

Sustainability information

As a public limited company, the Company is subject to high requirements for financial, operational and sustainability-related transparency. The Company's sustainability work is based on an annually updated policy that describes how environmental, social and corporate governance aspects are integrated into the operations and forms the basis for the non-financial disclosures.

The company operates primarily digitally, which limits its direct environmental footprint. Environmental work therefore focuses on reducing paper usage, sustainable travel choices and digital working methods that can reduce emissions from daily commuting. The business also prioritizes recycling and responsible resource consumption.

The company's international profile contributes to a business characterized by diversity and inclusion. The group strives for a work environment where employees are treated equally regardless of background and where fundamental rights and freedoms are respected. Forced labor and child labor are not accepted, and the company is based on fundamental principles of human rights in its internal work and in its relationship with partners and other stakeholders.

Business ethics are a central part of the Company's governance. Fairness, integrity and transparency shall characterize the operations, which means zero tolerance for bribery and corruption and compliance with applicable rules and competition law principles. The Board determines the overall direction for the sustainability work and the operational management is responsible for implementation in day-to-day operations.

Information security and data protection are particularly important areas for the Company. OODA AI develops and provides platforms and AI solutions for business-critical environments, which places high demands on control, integrity and reliability. The Company therefore works with encryption, separate storage solutions and other security measures to protect data, and the processing of personal data must be in accordance with the General Data Protection Regulation, GDPR. During the year, the Company has also continued to develop its platform with a focus on safe AI use, regulatory compliance and verifiable infrastructure.

The company maintains an ongoing dialogue with its main stakeholders, including employees, customers, partners, suppliers, investors, authorities and society at large. The overall ambition is to conduct responsible and transparent operations that create long-term value for shareholders, customers, employees and society. The policy is revised at least once a year to ensure continued relevance and effectiveness.

Expected future development

The Group will continue to focus on strengthening its position as a leading player in AI and next-generation AI infrastructure in the coming financial years. The goal is to further develop and scale OODA AI's platform, expand the partner program and broaden distribution through self-service, partner channels and white label-based offerings. A broader commercialization of the platform is planned for the beginning of the second quarter of 2026.

The Group will also continue to expand existing customer relationships and strategic partnerships, including collaborations with HMM Deutschland, Sergel Kreditjånster, as well as distribution and integration partners such as Allgeier Inovar GmbH and TIM Solutions GmbH. These collaborations strengthen the conditions for broader market penetration, recurring revenues and a more scalable business model.

In parallel, the Company will continue to develop the underlying infrastructure for decentralized, verifiable and secure AI computing. In 2025, the Company will have gone from concept to functioning infrastructure with completed litepaper, MVP and test network in operation, and the next step is to take the model further towards commercial use. The Company believes that the combination of a scalable product, growing distribution, low cost base and continued technical differentiation provides good conditions for continued growth with improved profitability.

Going concern

Completed conversion

In 2025, the Group has taken the next step in the transformation that began in 2024. The previous phase was characterized primarily by streamlining, cost reductions and structural changes. In 2025, the focus has instead increasingly been on commercialization, scaling and further development of the operational core business within AI. The progress made in customer projects with, among others, HMM Deutschland, Sergel Kreditjånster and Win.Rocks AG shows that the Company's technology works in practical and business-critical applications and that it can be scaled further in several different customer segments. At the same time, the Company has continued to expand its platform, its partner structure and its technical infrastructure for next-generation AI services.

Going concern

The Board of Directors notes that the reported financial position as of December 31, 2025 has been significantly affected by the review of financial holdings and results from associated companies and other items affecting valuation. The Group's equity at the end of the year amounted to SEK 23,858 thousand, compared with SEK 119,371 thousand the previous year. However, the Board of Directors believes that these items do not reflect the development in the core operational activities, where the Company has shown strong growth during the year, positive EBITDA, significantly lower financing costs and positive cash flow from operating activities during the second half of the year.

The Company's financial position has been strengthened during the year through completed capital raisings and lower indebtedness. During 2025, the Company was provided with capital through issues in January, March and August, and after the end of the financial year, it was also decided to issue another cash issue of approximately SEK 10 million. These capital contributions have improved the Company's scope for action while reducing the risk level in the balance sheet. In parallel, the Board and management have continued their work to keep the cost base low, simplify the structure and focus resources on operations with clear strategic importance.

The Board of Directors assesses that the conditions for continued operation in 2026 primarily rest on continued commercialization of the platform, expanded distribution through partner channels and self-service, continued cost control and the ability to provide additional capital if necessary. The broader launch of the platform, which has been communicated for the beginning of the second quarter of 2026, is considered an important step in this development. In light of the operational development in 2025, the capital raisings that have been completed and decided upon, and the continued streamlining of the Group, the Board of Directors assesses that the Company has the conditions to continue operating and that the annual report can therefore be prepared on the going concern basis.

Owner

As of December 31, 2025, the Parent Company had two owners who each owned more than 10% of the Company. The owners were Arli and Halida Mujkic, who each owned 11.93%. As related parties, they jointly owned 23.87%.

Significant events during the financial year

- On January 10, 2025, a cash issue of SEK 11,512,368 with 71,064 shares was registered with the Swedish Companies Registration Office at a price of SEK 162 per share.
- On March 7, 2025, the Company communicated the volume of the agreement with HMM Deutschland, which is estimated at approximately SEK 10 million in 2025 and SEK 30 million in 2026.
- On March 25, 2025, the Company was awarded a development grant of USD 425,000 from the Midnight Foundation, with the possibility of an additional USD 480,000 in 2025.
- On March 31, 2025, the Company decided on a cash issue of SEK 29,858,563 with 184,312 shares at a price of SEK 162 per share, which was subsequently registered with the Swedish Companies Registration Office.
- On 14 May 2025, the companies EO Capital 2, EO Capital 3, EPLIK 202306 and EPLIK 202312 merged into oodash Portfolio AB.
- On May 22, 2025, an agreement was signed regarding AI services for document interpretation for Sergel Kredittjänster.
- On May 23, 2025, the Company entered into a partnership with Phala Network to develop decentralized confidential AI computing.
- On July 3, 2025, the Company expanded its collaboration with Win.Rocks AG through a new order of EUR 750,000, which meant that the total value of the agreements amounted to approximately SEK 21 million.
- On July 9, 2025, the Company changed its name to OODA AI AB (publ) according to a resolution at the Annual General Meeting.
- On August 31, 2025, the Company decided on a cash issue of approximately SEK 15 million with a maximum of 90,835 shares at a price of SEK 162 per share, which was subsequently registered with the Swedish Companies Registration Office.
- On November 15, 2025, the Company presented at the OV Demo Day and shared its plan towards a future launch on Base by Coinbase.
- On December 15, 2025, the Company signed a new agreement with Win.Rocks AG for a new project of at least SEK 15 million over 24 months.
- On December 18, 2025, the merger of oodash Sweden AB was registered, which merged into oodash Portfolio AB.
- During the year, the Company acquired additional shares in EO Capital 1 AB corresponding to a total of 44.31 percent, which meant that as of December 31, 2025, the Company owned 100 percent of EO Capital 1 AB.
- During the year, additional shares in Apotekamo AB were also acquired, corresponding to a total of 2.53 percent, which meant that as of December 31, 2025, the Company owned 45.33 percent of Apotekamo AB.

Significant events after the end of the financial year

- On January 5, 2026, the merger of EO Capital 1 AB was registered with the Swedish Companies Registration Office and the Company was merged into OODA AI AB (publ).
- On March 16, 2026, a new website and platform were published and will be offered to the public in the second quarter of 2026.
- On March 31, 2026, the Company decided on a cash issue of approximately SEK 10 million with a maximum of 45,750 shares at a price of SEK 219 per share.

Risks

Competent personnel

The company's continued development is dependent on being able to attract, retain and develop qualified personnel in artificial intelligence, product development, decentralized infrastructure and business development. Competition for experienced AI profiles remains high. At the same time, the group believes that its technology profile, international focus and efficient organizational structure provide good conditions for attracting and retaining key competence. The company uses AI to a large extent in its own operations, which reduces the need for extensive staff expansion, but the operations remain dependent on a limited number of key individuals.

Market risks

The Company operates in markets characterized by rapid technological development, high levels of innovation and changing customer behavior. OODA AI's continued growth is dependent on the Company successfully translating its technical platform into increased usage, broader distribution and long-term recurring revenue. In 2025, the Company has shown strong revenue growth, expanded customer agreements and established a partner program for broader distribution, but there is a risk that commercialization will develop more slowly than planned, that major customer projects will be delayed or that the use of the platform will not reach the expected scale. To mitigate this risk, the Company is continuously working on product development, customer validation, strategic partnerships and expansion of partner channels.

Macro factors such as inflation, interest rate changes, currency movements and a weaker investment climate can affect both customers' willingness to invest and the capital market's risk appetite. This in turn can affect demand, sales cycles and the Company's ability to raise future capital on attractive terms. The Board therefore closely monitors market developments and is continuously working to adapt the Company's financing and growth plans to prevailing market conditions.

Regulatory changes can affect both the Parent Company and the Group's operations. As the Company operates in areas such as AI, data protection, cybersecurity and tokenization, changing requirements regarding, for example, data management, AI security, regulatory compliance and digital assets may result in increased costs, longer lead times or the need for adaptations in products and processes. The Company therefore monitors regulatory initiatives on an ongoing basis and develops its platform with a focus on safe, verifiable and compliant AI use.

Financial risks

In 2025, the Group strengthened its operational activities through significantly increased net sales, positive EBITDA and significantly lower interest expenses compared to the previous year. At the same time, the year's profit and equity were significantly affected by impairments, revaluations and results from previous financial holdings. At the end of 2025, the Group's equity amounted to SEK 23,858 thousand and cash and cash equivalents to SEK 3,335 thousand. This means that the Company continues to be dependent on good cost control, functioning cash flows from operational activities and the ability to provide additional capital if necessary.

The Board of Directors believes that continued low debt is important for a healthy capital structure. During the year, the Company has carried out several issues that have strengthened liquidity and reduced financial risk, and after the end of the financial year, a further issue has been decided. Despite this, a liquidity risk remains if revenue development deviates significantly from plan or if capital market conditions deteriorate. Cash flow forecasts are therefore updated continuously and include scenarios for delayed customer payments, lower sales rates and changed financing conditions.

The Group continuously invests in intangible assets, primarily related to the AI platform and related infrastructure. If commercial development does not meet expectations, or if market conditions change rapidly, further impairment needs may arise, which could negatively affect earnings and equity. The Board therefore monitors developments on an ongoing basis and evaluates business plans, cost structure and investments in relation to the Company's development.

Risks in holdings

There is a risk that values in remaining holdings will not be realized to the extent expected, or that divestments, mergers or other structural measures cannot be implemented on favorable terms.

The Board of Directors continuously evaluates the strategic importance of the holdings and may reduce exposure further if it is deemed to create value for the Company and its shareholders.

Group structure

OODA AI AB (publ) is the parent company of the group, which as of December 31, 2025 comprised 3 legal entities, all of which are wholly owned subsidiaries oodash Portfolio AB, oodash Germany GmbH and EO Capital 1 AB. The group prepares its consolidated financial statements in Swedish kronor.

In 2025, the companies EPLIK 202306, EPLIK 202312, EO Capital 2 and EO Capital 3 and oodash Sweden AB merged into oodash Portfolio AB.

After the end of the financial year, on January 5, 2026, the merger of EO Capital 1 AB into OODA AI AB (publ) was registered.

Note 1 Accounting and valuation principles

General information

The annual report and consolidated accounts have been prepared in accordance with the Annual Accounts Act and BFNAR 2012:1 Annual Report and Consolidated Accounts (K3). The accounting principles are unchanged compared to the previous year.

Revenue recognition

Revenue has been recognized at the fair value of what has been received or will be received and is reported to the extent that it is probable that the economic benefits will flow to the company and the revenue can be calculated reliably.

The company's revenue consists exclusively of consulting services. Revenue is reported in accordance with K3 Chapter 23 and is recognized as revenue as the services are performed. Revenue primarily relates to consulting assignments that are performed continuously over time. For assignments on a recurring basis, revenue is recognized as the work is performed based on time spent and a chargeable hourly rate. For fixed-price assignments, percentage-of-completion accounting is applied, where revenue is recognized in relation to the degree of completion of the assignment. The degree of completion is normally determined based on time spent in relation to the total estimated time for the assignment.

Work performed but not yet invoiced is reported as accrued income (interim receivables). Advance billing is reported as prepaid income until the service has been performed.

If there is uncertainty about the possibility of receiving payment, revenue is reduced and an expense is recognized corresponding to the amount that is deemed uncertain.

Compensation in the form of interest or dividends is recognized as income when it is probable that the company will receive the economic benefits associated with the transaction and when the income can be measured reliably.

Interest is recognized as income according to the so-called effective interest method. Dividends are recognized as income when the company's right to payment is secured.

Ongoing service assignments

Income from assignments on a recurring basis is recognized as income as the work is performed and materials are delivered or consumed, meaning that the profit from the assignments is settled successively.

If it is not probable that payment will be received for amounts that have already been recognized as revenue, the amount that is not likely to be received is recognized as an expense.

In the balance sheet, reported revenue is compared with the amounts invoiced to the customer during the same period. If the invoiced amounts exceed the reported revenue, the difference constitutes a liability, which is reported as invoiced but not accrued revenue. If the revenue exceeds the invoiced amounts, the difference constitutes a receivable, which is reported as accrued but not invoiced revenue.

Consolidated financial statements

Consolidation method

The consolidated financial statements have been prepared according to the acquisition method. This means that the identifiable assets and liabilities of acquired businesses are reported at market value according to the acquisition analysis. If the acquisition value of the business exceeds the estimated market value of the expected net assets according to the acquisition analysis, the difference is reported as goodwill.

Subsidiary

In Oodash Portfolio AB there are a number of portfolio holdings, some of which are majority owned but are not consolidated in the consolidated accounts, as they are not considered to be material to the group. The consolidated accounts otherwise include, in addition to the parent company, all companies in which the parent company directly or indirectly holds more than 50% of the voting rights or otherwise has a controlling influence and thereby has the right to shape the company's financial and operational strategies with the aim of obtaining economic benefits.

A subsidiary's income and expenses are included in the consolidated financial statements from the date of acquisition until the date when the parent company no longer has a controlling influence over the subsidiary.

Minority interest is the portion of the subsidiary's results and net assets in the consolidated financial statements attributable to equity instruments that are not, directly or indirectly through subsidiaries, owned by the parent company.

Minority interests are reported in the consolidated balance sheet as a separate item within the consolidated equity. The accounting is based on the group as a single entity according to the so-called unit theory. All assets over which the group has a controlling influence are included in the consolidated balance sheet, even those that are partly owned by other owners. The minority's share of the profit after tax is reported separately as a minority interest.

Acquisitions and divestments of minority interests are reported within equity.

Associated companies and Jointly controlled entities

Associated companies are companies in which the company has significant but not controlling influence. Significant influence is normally considered to exist when the company owns at least 20% but not more than 50% of the votes in another company.

Accounting for associated companies

Holdings in associated companies are reported in the consolidated accounts using the equity method. This means that an acquisition analysis is prepared and any surplus or deficit values are identified. The consolidated value of the share is affected during the holding period by amortization of surplus values or reversal of deficit values. The share value is also affected by the share of profit in the associated company during the holding period, adjusted for internal profits and other consolidated adjustments. Dividends received reduce the consolidated value.

The share of the associated company's profit after tax is reported on a separate line and affects the Group's operating profit. If there is a reliable and lasting increase in value and the value significantly exceeds the book value, it is written up to a maximum of this value. The revaluation amount is used for allocation to a revaluation fund.

Transactions between group companies

Intra-group receivables and liabilities, transactions between group companies and unrealized profits are eliminated in full. Unrealized losses are also eliminated unless the transaction corresponds to an impairment requirement.

Changes in internal profit during the financial year have been eliminated in the consolidated income statement.

Translation of foreign subsidiaries

The financial statements of foreign subsidiaries have been translated using the current exchange rate method. All items in the balance sheet have been translated at the closing rate. All items in the income statement have been translated at the average rate during the financial year. Any differences that arise are recognized directly in equity.

Goodwill

Goodwill is the difference that arises if the acquisition value of the acquired entity is higher than the value of the acquired entity's net assets. At the time of acquisition, the goodwill arising is recognized as an asset in the balance sheet.

Intangible assets

The company reports internally generated intangible assets according to the capitalization model. This means that all expenses related to the development of an internally generated intangible asset are capitalized and amortized over the asset's estimated useful life, provided that the criteria in BFNAR 2012:1 are met.

When accounting for development expenses, the capitalization model is applied. This means that expenses incurred during the development phase are recognized as assets when all of the following conditions are met:

- It is technically possible to complete the intangible asset so that it can be used or sold.
- The intention is to complete the intangible asset so that it can be used or sold.
- Prerequisites exist to use or sell the intangible asset.
- There are necessary and adequate technical, financial and other resources to complete the development and to use or sell the intangible asset.
- The expenses attributable to the intangible asset can be measured reliably.

Internally generated intangible assets are reported at cost less accumulated depreciation and impairment losses.

The cost of an internally generated intangible asset consists of all directly attributable expenses (e.g. materials and salaries).

Fixed assets

Intangible and tangible fixed assets are reported at cost less accumulated depreciation according to plan and any impairment losses.

Depreciation is calculated on a straight-line basis over the expected useful life, taking into account any significant residual value. The following depreciation percentages are applied:

Intangible fixed assets

Capitalized expenses for development work	20 %
Goodwill	20 %

Tangible fixed assets

Equipment, tools and installations	20 %
------------------------------------	------

Financial instruments

Financial instruments are measured at cost. The instrument is recognized in the balance sheet when the company becomes a party to the contractual terms of the instrument. Financial assets are derecognized when the right to receive cash flows from the instrument has expired or has been transferred and the company has transferred substantially all the risks and rewards of ownership. Financial liabilities are derecognized when the obligations are settled or otherwise extinguished.

Financial assets and liabilities are reported in accordance with Chapter 11 (Financial instruments measured at cost) in BFNAR 2012:1.

Shares in subsidiaries

Shares in subsidiaries are reported at cost less any impairment losses. Cost includes the purchase price paid for the shares and acquisition costs. Any capital contributions are added to cost when they arise.

Other long-term securities holdings

Investments in securities acquired with the intention of being held long-term have been reported at their acquisition value. An assessment is made on each balance sheet date for any impairment.

Accounts receivable/current receivables

Accounts receivable and short-term receivables are reported as current assets at the amount expected to be collected after deduction of individually assessed doubtful receivables.

Loans and accounts payable

Loan liabilities and accounts payable are initially recognized at cost less transaction costs. If the reported amount differs from the amount to be repaid at maturity, the difference is accrued as interest expense over the term of the loan using the instrument's effective interest rate. This ensures that the reported amount and the amount to be repaid at maturity are the same.

Offsetting of financial receivable and financial liability

A financial asset and a financial liability are offset and reported with a net amount in the balance sheet only when there is a legal right of set-off and when a settlement with a net amount is intended to occur or when a simultaneous disposal of the asset and settlement of the liability is intended to occur.

Impairment testing of financial fixed assets

At each balance sheet date, an assessment is made as to whether there are indications of impairment of any of the financial assets. Impairment is made if the decline in value is deemed to be permanent and is tested individually.

Leasing agreement

The company reports all leases, both financial and operational, as operating leases. Operating leases are reported as an expense on a straight-line basis over the lease period.

Income taxes

Total tax consists of current tax and deferred tax. Taxes are recognized in the income statement, except when the underlying transaction is recognized directly against equity, in which case the related tax effects are recognized in equity.

Current tax

Current tax refers to income tax for the current financial year and the portion of income tax from previous financial years that has not yet been reported. Current tax is calculated based on the tax rate in effect on the balance sheet date.

Deferred tax

Deferred tax is income tax that relates to future financial years as a result of past events. Accounting is carried out according to the balance sheet method. Under this method, deferred tax liabilities and deferred tax assets are recognised on temporary differences that arise between the book and tax values of assets and liabilities, as well as for other tax deductions or deficits.

Deferred tax assets are reported net of deferred tax liabilities only if they can be paid in a net amount. Deferred tax is calculated based on the tax rate in effect on the balance sheet date. The effects of changes in applicable tax rates are recognized in the income statement in the period in which the change is enacted. Deferred tax assets are reported as financial assets and deferred tax liabilities as provisions.

Deferred tax assets relating to loss carryforwards or other future tax deductions are recognized to the extent that it is probable that the deductions can be offset against future taxable profits.

Due to the connection between accounting and taxation, the deferred tax liability attributable to untaxed reserves is not reported separately.

Employee benefits

Employee benefits refer to all forms of compensation that the company provides to employees. Short-term benefits include salaries, paid vacation, paid absence, bonuses and post-employment benefits (pension). Short-term benefits are recognized as an expense and a liability when there is a legal or constructive obligation to pay a benefit as a result of a past event and a reliable estimate of the amount can be made.

Pensions

All of the Company's pension plans are defined contribution plans. A defined contribution plan is a pension plan under which the Company pays fixed contributions to a separate legal entity. The Company has no legal or constructive obligation to pay additional contributions if this legal entity does not have sufficient assets to pay all employee benefits related to the employees' service in the current or prior periods.

For defined contribution pension plans, the company pays contributions to publicly or privately administered pension insurance plans on a mandatory, contractual or voluntary basis. The company has no further payment obligations once the contributions are paid. The contributions are recognized as personnel costs when they fall due for payment. Prepaid contributions are recognized as an asset to the extent that a cash refund or reduction in future payments can benefit the company.

Estimates and assessments

The preparation of financial statements and the application of accounting policies are often based on management's judgments, estimates and assumptions that are considered reasonable at the time the judgment is made. Estimates and assumptions are based on historical experience and a number of other factors that are considered reasonable under the circumstances. The results of these are used to assess the carrying amounts of assets and liabilities that are not otherwise clearly apparent from other sources. The actual outcome may differ from these estimates and judgments. Estimates and assumptions are reviewed regularly.

According to management, significant judgments regarding applied accounting principles and sources of uncertainty in estimates are primarily related to:

Consolidation method

In Oodash Portfolio AB there are a number of portfolio holdings, some of which are majority owned but are not consolidated in the consolidated accounts, as they are not considered to be material to the group.

Capitalization of intangible assets

The allocation between the research and development phases of new software development projects and the determination of whether the requirements for capitalization of development costs are met require judgment. After capitalization, it is monitored whether the accounting requirements for development costs are still met and whether there are indications that the capitalized costs may be subject to a decrease in value. The Group holds capitalized intangible assets that are not yet completed. Such assets are tested for impairment on an ongoing basis. In order to be able to do this, an estimate must be made of future cash flows attributable to the asset or the cash-generating unit to which the asset is to be attributed when it is completed. An appropriate discount rate must also be determined to be able to discount these estimated cash flows.

Uncertainty in the estimate

The following information is provided about estimates and assumptions that have a significant effect on the recognition and measurement of assets, liabilities, income and expenses. The outcome from these may differ materially.

Impairment losses

To assess the need for impairment, the recoverable amount of each asset or cash-generating unit is calculated based on expected future cash flows and using an appropriate interest rate to discount the cash flows. Uncertainties lie in assumptions about future cash flows and determining an appropriate discount rate.

Loans to associated companies

At the balance sheet date, the company makes assessments of the recoverable value of loans granted to associated companies of SEK 8,338 thousand. The assessment is based on a comprehensive analysis of the associated companies' financial position, repayment capacity and forecasts of future cash flows. If there are objective indications that a loan will not be fully or partially repaid, the receivable is written down to the estimated recoverable value. The assessments include uncertainties regarding future results and actual outcomes may deviate from estimates made.

Accrued income

At the balance sheet date, the company makes assessments of the value of services delivered that have not yet been invoiced or paid by customers amounting to SEK 8,442 thousand. The assessment is based on a comprehensive analysis of services delivered based on agreements entered into with customers that have not yet been invoiced and the customers' ability to pay. If there are objective indications that accrued income will not be paid in full or in part, the asset is written down to the estimated recoverable amount. The assessments include uncertainties regarding customers' future ability to pay and actual outcomes may differ from estimates made.
